ISSAM EL ABBADI

Observability & Automation Engineer

Fez, Morocco · +212 6 16 43 81 14 · issamelabbadi100@gmail.com

Systems engineer specialised in monitoring and observability, with close to 5 years running critical production environments. I design and operate Zabbix, Grafana and Prometheus platforms across an estate of 1,200+ Linux and Windows systems, and automate their configuration through a GitOps approach. Master's degree in Cybersecurity; professional French and English.

SKILLS

Observability Zabbix · Grafana · Prometheus · Centreon · Eye of Network · Elasticsearch

Automation Python (PCAP) · Bash · NetBox · GitHub · GitLab CI/CD · cron

Systems Linux (RHEL, Debian, CentOS, Ubuntu) · Windows Server · Active Directory

Cloud & virtualisation AWS (EC2, VPC, Route 53) · VMware · Proxmox (Qemu/KVM) · Hyper-V · Docker · Kubernetes

Web & data Traefik (reverse proxy, CDN, WAF) · Apache · Nginx · MySQL/MariaDB · PostgreSQL · Redis

Operations L2/L3 support · incident and change management · root cause analysis · SLAs · runbooks

EXPERIENCE

Systems Engineer
May 2025 - Present

Convotis Morocco · Fez

- Design and operate monitoring for 1,200+ Linux and Windows systems using Zabbix, Grafana and Prometheus, shortening detection and resolution times.
- Integrated Zabbix with Grafana to deliver dashboards and a map of the physical data centres, giving teams full visibility of the infrastructure.
- Built GitOps automation for a business-critical Zabbix environment using GitLab and NetBox as source of truth, replacing manual UI configuration with a version-controlled pipeline.
- Configured secure, highly available load balancing with Traefik (reverse proxy, CDN, WAF) in front of Apache and Nginx back ends.
- Provisioned virtual machines across AWS, Proxmox and VMware, and led diagnosis of complex production incidents (L2/L3).

Systems & Monitoring Administrator
Sep 2024 - May 2025

CGI · Fez

- Deployed and administered Centreon, Eye of Network and MOM (internal client tooling) across French and international client estates.
- Defined monitoring indicators and handled alerts and incidents within contractual SLAs, reducing downtime.
- Automated recurring operations in Bash, removing repetitive manual tasks and the errors that came with them.

DevOps Engineer (Flexera)
Jun 2023 - Sep 2024

CGI · Fez

- Developed Python automation scripts replacing manual infrastructure tasks and contributed to CI/CD pipelines (Git workflows).
- Carried out preventive and corrective system maintenance ahead of version upgrades.

Infrastructure & Technical Support
Mar 2022 - Jun 2023

CGI · Fez

- Administered Linux and Windows environments: VM provisioning, Active Directory, VMware and Hyper-V virtualisation.
- Primary technical contact for 120+ institutional Canadian clients; diagnosed platform incidents and reworked support processes.
- Monitored security alerts (SentinelOne, Kaspersky, Proofpoint) and overhauled incident logging and escalation procedures.

PROFESSIONAL PROJECTS

Multi-region hybrid private cloud

Convotis · Hamburg, Germany · virtualisation, network, monitoring

- Deployed a secure private cloud across 3 high-availability regions: 30+ clustered Proxmox nodes, switches, firewalls and internal applications.
- Delivered end-to-end monitoring of a strictly segmented environment (infrastructure, network, applications).

Wazuh SIEM monitoring & CIS compliance

Convotis Morocco · Wazuh, Zabbix, CIS benchmarks

- Built centralised monitoring of Wazuh components across a large VM estate through the Zabbix API, increasing visibility of security events.
- Contributed, alongside the Ansible team, to automating CIS compliance audits and remediation across 300+ workloads, cutting remediation times from days to hours.

PERSONAL PROJECTS

Automated video production pipeline

Python · FastAPI · ffmpeg · AI model integration

- Designed and directed an end-to-end automated system: image extraction, image description by vision models, script generation, text-to-speech, video assembly and YouTube publishing (Data API v3, OAuth).
- Parallel pipeline architecture with automatic recovery after failure and fallback across several AI providers (local GPU, cloud gateway); 200+ episodes processed.
- Operations web interface (FastAPI, VPN-restricted access): job queues, live progress, GPU and model monitoring.
- Wrote detailed specifications and reviewed every change as a GitHub pull request (40+ PRs) with automated tests; development was AI-assisted.

Home lab & tooling

Docker · Twingate · Python · Windows

- Local AI models on GPU, a multi-provider gateway, Docker services and zero-trust remote access (Twingate) with nothing exposed to the internet.
- Reusable tools: a CLI utility that detects and removes silences from video (ffmpeg) and a Windows control panel with live status monitoring.

EDUCATION

Master's in Cybersecurity · ENSA Kenitra — 2023 - 2025

Bachelor's in Information Systems & Networks · Ibn Tofail University, Kenitra — 2021 - 2022

CERTIFICATIONS & LANGUAGES

Certification PCAP: Programming Essentials in Python (2021)

Languages Arabic (native) · French (professional) · English (professional)
